

Corporate Overview

Interop Technologies is the primary resource for wireless messaging, device management, and entertainment and personalization solutions. We serve companies in the global wireless, Voice-over-IP (VoIP), packaged goods, and content industries and have nearly 160 deployments with more than 55 telecommunications operators.

Our solutions support many advanced services for end users: short message and multimedia message capability, Internet access, over-the-air programming, and personalized content.

Your Resource for Scalable, Flexible, Reliable Wireless Solutions

Interop Technologies takes an extremely client-centric approach. We develop and build innovative technology solutions that help companies of all sizes to:

- Increase revenue
- Enhance brand loyalty
- Meet consumer demand for advanced services
- Extend brands to the mobile market

Interop Technologies offers fast time to market. You can rely on our capabilities and highly experienced personnel to help launch and manage advanced services effectively. Our end-to-end solutions include:

- Software and hardware platforms
- An extensive content library fully licensed from major publishing houses
- World-class technical support

Founded in 2002 by telecommunications industry pioneers, Interop Technologies is managed by senior executives with extensive experience as wireless operators and vendors. We leverage our expertise to ensure quality products and services, as well as smooth implementations.

Our business has grown rapidly through repeat business and referrals from satisfied clients. We currently serve wireless operators and major brands across North America, Latin America, and the Caribbean. In addition, we're expanding quickly to increase our capabilities, enhance our product line, and serve more clients.

The Interop Technologies Difference

Scalable

Leading-edge solutions from Interop Technologies meet the demanding scalability requirements of wireless and Voice-over-IP (VoIP) operators and major brands. Whether your customer base numbers in the thousands or the hundreds of millions, Interop Technologies delivers the capacity you need to support advanced services.

Innovative, High-Quality

The company develops and refines its solutions in-house, ensuring state-of-the-art technology and total quality control. All Interop Technologies solutions offer “five-nines” (99.999 percent operational) reliability.

Flexible

Interop Technologies is the only solutions provider offering a flexible choice of deployment options to fit any business model:

- Hosted—Share technology in a cost-effective, service bureau environment
- Modified Hosted—Start with hosted services and seamlessly migrate to turnkey technology as volume demands. This approach helps reduce risk by keeping your services on the same platform, rather than forcing a change in vendors just as your business is taking off.
- Turnkey—Purchase platforms outright for on-site deployment

In addition, both the modified hosted and turnkey implementations can be customized for specific commercial applications.

Regardless of which implementation you choose, Interop Technologies continuously monitors its deployments to ensure quality performance.

Responsive

Have a question or need advice? Seasoned engineers provide knowledgeable technical support. We resolve most issues with the first call. We’re also glad to help craft an application to help provide your company with sustainable competitive advantage.

Reliable

Interop Technologies has a proven track record as a trusted business partner. Professionally managed, the company is profitable, rapidly growing, and well positioned to support the next generation of wireless technologies and users.
