inCode Acquires Mobility Enterprise Unit of Peak Technologies, Expands Services for Vertical Enterprise Markets

SAN DIEGO, CA. Mar. 27, 2006—inCode (www.incodewireless.com), a global wireless business and technology consulting firm headquartered in San Diego, announced that it has acquired the Mobility Enterprise Solutions and Applications business of Peak Technologies (www.peaktech.com), a Columbia, Maryland, provider of automatic identification and data collection systems.

“This acquisition significantly strengthens and expands our current capabilities to serve vertical enterprise markets,” said Todd Crick, inCode Executive Vice President of Emerging Business. “inCode will now have more tools, greater industry coverage, a larger sales force and more application and product partner options to serve enterprise customers.”

Under the purchase agreement, inCode obtained a number of valuable assets, including Peak’s customized, mobile enterprise libraries and its Mobility Solutions Support Center, which provides staging, kitting, distribution and post-sales support services. James Quigley, previously head of Peak’s Mobility Enterprise business, has joined inCode as Practice Director, Mobility Solutions, and inCode retained all of the unit’s additional employees.

“I’m very pleased that products and expertise developed by Peak are now under the inCode umbrella,” Quigley said. “The combination of our product and service offerings will enable a wider array of enterprises to experience the enhanced productivity and efficiency that mobility enables.”

inCode now offers comprehensive enterprise solutions in the following areas: asset management, supply chain (including Radio-Frequency Identification or RFID) management, field force automation, sales force automation and transportation/telematics. These solutions are focused on the following vertical business markets: retail and distribution, oil and gas, manufacturing, utilities, healthcare, travel and transportation, government and public safety, financial services, and telecommunications.

About inCode:

inCode (www.incodewireless.com), a global wireless business and technology consulting firm, develops and implements high-impact strategies, solutions and products that increase profitability and performance of wireless networks. inCode also guides enterprises in harnessing the power of wireless communications for productivity and competitive advantage. Further, inCode operates an innovative Next-Generation Wireless Technology Lab. Founded in 1998 by wireless business veterans and technology pioneers, inCode understands where the wireless world is going and how

to get there first. inCode is an ISO 9001 certified company. Headquartered in San Diego, inCode has offices in Atlanta, Calgary, Toronto, Guatemala City and São Paulo in the Americas; London, Paris, Stockholm and Madrid in Europe; and Hong Kong and Beijing in Asia.
